

CUSTOMER SUCCESS STORY

KINGSWOOD COLLEGE, BOX HILL, VICTORIA

Kingswood College Court Conversion!

Grassports was contacted by Kingswood College to complete the multisport court construction as they had heard about our wonderful reputation, work ethic and quality.

Grassports demolished the existing asphalt courts, then supplied and installed 50mm crushed rock bedding layer over the entire surface for the new concrete slab, with a suitable drainage system.

Ready for surfacing, we installed 1,509m² of Laykold Acrylic surface across the new multipurpose courts with line marking for netball and basketball. Using US Open Blue on the main courts and Vibrant Artic on court surrounds. Finishing the project with reversible netball/basketball towers.

After completing the project successfully, Kingwood College has contacted us to complete further works but this time a synthetic project, we look forward to keeping a strong relationship.
